Commonly Used Acronyms and Abbreviations

CEMP	Community Environmental Monitoring Program
CWB	Contact Water Basins
Eagle	Eagle Mine
EPA	U.S. Environmental Protection Agency
GW	Groundwater
GWDP	Groundwater Discharge Permit
HTDF	Humboldt Tailings Disposal Facility
Foundation	Community Foundation of Marquette County
MP	Mine Permit
PM	Particulate Matter (dust) measured in microns
SWP	Superior Watershed Partnership
TBD	To Be Determined
TDRSA	Temporary Development Rock Storage Area
TWIS	Treated Water Infiltration System
WTP	Water Treatment Plant

Introduction

The Community Environmental Monitoring Program (CEMP) of the Eagle Mine began during 2012 and is implemented by three community-based organizations; the Superior Watershed Partnership (SWP), the Keweenaw Bay Indian Community (KBIC), and the Community Foundation of Marquette County (Foundation). The CEMP is defined and governed by formal agreements between the SWP, Foundation, and Lundin Mining, who purchased the Eagle Mine from Rio Tinto during 2013. The CEMP is designed to build a comprehensive and accurate picture of any environmental impacts that may be a result of Eagle Mine's operations at the mine site, the Humboldt Mill, and along the designated Transportation Route. The CEMP is independent, transparent, and based on the highest scientific standards.

The CEMP consists of four main components: 1) Verification Monitoring, which includes verifying the environmental monitoring done by Eagle Mine as required by its permits 2) Additional monitoring, which includes environmental monitoring done by SWP over and above the monitoring that Eagle Mine is required to do under its permits; and 3) Publication of results and ratings of Eagle Mine's environmental performance; and 4) Community Outreach, to inform the public and provide opportunities for the community to provide input regarding CEMP activities.

In December 2019, the SWP in cooperation with KBIC, and the Foundation negotiated renewal of the CEMP Agreement with Eagle Mine to allow for continued environmental monitoring of operations at the Mine and the Humboldt Mill through 2025. The 2025 Work Plan marks the 14th year of CEMP monitoring and the 12th year of monitoring under the "operational" phase of production. It also marks the 7th year of CEMP monitoring in cooperation with the KBIC.

The Work Plan is organized into three sections that describe CEMP activities 1) Annual Monitoring Objectives, 2) Monitoring Results and Performance Ratings, and 3) Community Input and Public Outreach. A summary of the annual monitoring objectives including work plan tasks, standards and frequency of activities is provided in Table 1. Community Environmental Monitoring Program monitoring locations and parameters for laboratory analyses are provided in Figures 1-9 and Tables 2-14 respectively.

1. Annual Monitoring Objectives

1.1. Verification Monitoring and Data Review

1.1.1. Baseline Data Review

The SWP and KBIC will continue to review and evaluate pre-mining (baseline) environmental data as it relates to data generated during monitoring of mining operations. The SWP recognizes that baseline data in and around the Eagle Mine includes data collected prior to September 2011. Data collected from the Humboldt Mill, Powell Township Air Station, and along the transportation route will be considered baseline through September 2014.

1.1.2. Procedures Review/Observations

SWP and KBIC will continue to review and observe data collection at Eagle Mine and the Humboldt Mill during 2025. The objective is to verify that the procedures used are appropriate and will result in the generation of data sets that are representative of environmental conditions.

1.1.3 Split Sampling

SWP and KBIC will carry out split sampling at permit required monitoring sites at the Eagle Mine site and the Humboldt Mill (groundwater, surface water, and facilities) in conjunction with Eagle Mine's scheduled monitoring. Split sampling is when a sample taken from a single source (e.g. a groundwater well) is divided in two, with each sample analyzed by a different certified laboratory. The objective of the split sampling is to verify that the laboratories used are appropriate and the results are representative of environmental conditions. Split samples will be conducted at Eagle Mine and the Humboldt Mill at the locations shown in Figures 1-6. The frequency and number of samples collected at each site are described in Table 2. Samples will be submitted to an independent laboratory for analyses. Analytical parameters, methods and reporting limits for split sampling are presented in Tables 3-10. The samples may be analyzed for the full parameter list or a subset of the parameters specified for that monitoring point. Results will be compared to Eagle Mine baseline data and applicable permit benchmarks and limits.

1.1.4 Interpretations Review

SWP and KBIC will continue to interpret results of Eagle Mine's permit required environmental monitoring data. The interpretations review will focus primarily on assigning likely root cause (mine impacts, data quality issues or unrelated impacts) to monitoring point values that exceed permit specified benchmarks or thresholds. The SWP and KBIC will utilize relevant baseline and secondary data (data from other sources) where appropriate to document interpretations of results and/or make comparisons to other local or regional environmental data.

1.2 Additional Monitoring

The CEMP Agreement and CEMP Annual Work Plan (this plan) summarize the objectives and procedures for additional (non-permit required) environmental monitoring of Eagle Mine's operations. Additional monitoring proposed for 2025 is summarized below.

1.2.1 Air Quality Monitoring

CEMP air quality monitoring began in 2012 as a result of community concerns about potential air quality impacts arising from Eagle Mine's operations in the vicinities of Big Bay (Powell Township), Marquette, and Humboldt, Michigan. The objective of the monitoring is to generate data that can be used to identify potential impacts to ambient air quality from mining operations. Potential sources of air pollution include mining activity (e.g., blasting, drilling, and facilities), ore transport, and ore processing.

During November of 2012, an air quality and meteorological station was installed in Powell Township per the original *CEMP Agreement*. The station is located in the community of Big Bay behind Crams General Store. The objective of the Powell Township air quality monitoring station is to generate data that can be used to identify potential air quality impacts in the community that may be a result of mining operations. Air quality data are compared to National Ambient Air Quality Standards and Michigan Air Toxic Screening Levels. The meteorological station measures wind speed and direction, temperature, barometric pressure, precipitation, solar radiation, and relative humidity on a continuous basis. During 2025, the station will monitor particulate matter (dust) in the 10-micron size

range (PM10) on a continuous basis. Particulate matter filters will also be sent to a laboratory for analysis of metal concentrations (Table 11) on a quarterly basis. A modem installed at the station provides real-time meteorological and air quality data (PM10) via the CEMP website (https://swpcemp.org/). In addition, periodic summary reports are posted to the CEMP website.

In addition, PurpleAir air quality monitoring devices will be used during 2025 to monitor potential impacts to ambient air quality from mining operations at Eagle Mine, the Humboldt Mill. At each location (TBD), PM 2.5 air quality data will be collected and compared to the U.S. EPA National Ambient Air Quality Standards for PM 2.5 particulate pollution. Results will be summarized and shared with the public via the CEMP website. The additional air quality monitoring will commence upon approval of a request for additional monitoring that details the standards and methodologies for the proposed monitoring. Estimated costs are included in the 2025 budget line item for Additional Monitoring (TBD).

1.2.2 Edible/Traditional Plant Tissue Monitoring

Edible/traditional plant tissue monitoring began in 2015 to evaluate concerns voiced by the KBIC and other community members regarding potential impacts from mining activities on native plant species of high cultural value. The monitoring includes collection and analysis of blueberries (as an indicator species), but may also include other important species such as Juneberry, chokecherry, pin cherry, raspberry, blackberry, strawberry, thimbleberry, cranberry, juniper berry, wintergreen, and wild rice. A list of parameters for analysis are provided in Table 12. Collection sites are located within a two-mile radius of the Eagle Mine and Humboldt Mill as well as a control location (Figure 7). Berry samples will be collected and sent out for analysis at a certified laboratory and compared to guidelines and daily intake recommendations including the US Environmental Protection Agency's oral Tolerable Intake Values (TDI) and the Food and Drug Administration's recommended Daily Values (DV). Periodic summary reports are posted to the CEMP website.

1.2.3 CEMP Groundwater Monitoring Well

On August 28-30, 2017, a CEMP groundwater monitoring well was installed near Eagle Mine to expand the existing monitoring infrastructure and further evaluate potential groundwater impacts as a result of mining activities. The CEMP well is located outside of the mine perimeter (fence) between the Treated Water Infiltration System (TWIS) and the headwaters of the East Branch of the Salmon Trout River, with a groundwater depth of 166-176 feet. Access to the site is made possible through an agreement with Lyme Great Lakes Holding LLC (formerly Weyerhaeuser Company). During 2025, groundwater data will be collected on a quarterly basis from the CEMP well (Figure 8). A list of parameters for analysis are provided in Table 13. Results of the monitoring will be compared to results from Eagle Mine's groundwater discharge permit groundwater monitoring sites.

1.2.4 Salmon Trout River Headwaters Monitoring

During 2017, CEMP in cooperation with the KBIC began water quality monitoring at 8 sites in the headwaters of the Salmon Trout River. The headwaters of the Salmon Trout River begin as natural springs at locations where groundwater daylights and becomes surface water (Figure 9). A list of parameters for analysis on a quarterly basis are provided in Table 14. The objective of additional monitoring of the headwaters of the Salmon Trout River is to monitor potential water quality impacts from Eagle Mine's operations at sites previously monitored by the U.S. Geological Survey (USGS) and the KBIC. Results of the monitoring will be compared to Michigan surface water quality standards and used to assess potential impacts from mining activities to the Salmon Trout River.

1.2.5 USGS Stream Monitoring Gages

The CEMP utilizes surface water quality data from USGS stream monitoring gages located on the Middle Branch Escanaba River at Humboldt, MI (04057800), Salmon Trout River near Big Bay, MI (04043238), and the East Branch Salmon Trout River near Dodge City, MI (04043244) to monitor potential impacts to surface waters from operations at the Humboldt Mill and Eagle Mine. Continuous data and field information from the gages are collected/evaluated by the Great Lakes Indian Fish and Wildlife Commission (GLIFWC) and communicated to CEMP partners via CEMP Technical Committee meetings.

1.2.6 Other Based on Results or New Activities

The SWP and KBIC may also collect additional data related to mining activities during 2025 based on results or new information, community input, and/or new activities including development of Eagle Mine closure plans. The SWP and KBIC will provide Eagle Mine with a plan (including locations, procedures, methodologies and standards) for any additional monitoring prior to commencing with monitoring activities. The CEMP Budget may be amended for additional monitoring needs as they are identified.

2 Monitoring Results and Performance Ratings

2.1 Data Processing/Publication

2.1.1 Data Processing

CEMP's laboratory(s) will deliver monitoring results in electronic format to SWP no later than 45 days of receipt of samples and the data will be processed by SWP within 5 working days of receipt from the laboratory. Data processing procedures will be conducted in a manner consistent with the *CEMP Agreement* and other agreed upon standards/operating procedures. Primary processing consists of verification that samples, parameters, analytical methods, and detection limits were completed as requested. Secondary processing will consist of the evaluation of laboratory quality control data and duplicate data for evidence of quality control issues. Tertiary processing consists of comparison of data to appropriate baseline data, permit specified criteria/benchmarks, or other agreed upon state or federal criteria. The final data processing step follows receipt of Eagle data and consists of the comparison of Eagle's laboratory derived values with values produced by CEMP's laboratory(s).

2.1 Performance Ratings

2.2.1 CEMP Report Card

The CEMP Report Card is located on the CEMP website and includes a red light, yellow light, and green light system used by SWP to rate Eagle Mine on its environmental performance on a quarterly basis by location (Mine or Mill) and type of monitoring. The CEMP website and Report Card will be updated to communicate results of environmental

monitoring at specific locations on a quarterly basis. In addition, the SWP will work with KBIC, Eagle Mine and additional partners to improve data interpretation and risk communication to the public, including, but not limited to, third party analysis and interpretation of data and risk communication as needed.

2.2.2 CEMP Monitoring Reports

In addition to the website and Report Card updates, CEMP will continue to periodically publish summary reports of monitoring activities and results to the CEMP website.

3. Community Outreach

The CEMP Community Outreach Plan (Figure 10) describes activities of SWP, KBIC, and the CFMC related to community outreach. The objectives of the plan are to inform the public about Eagle Mine's environmental performance and to obtain input from community members regarding CEMP. Outreach Plan activities are tracked quarterly and include, but are not limited to:

- Direct contacts/meetings with community members and interested groups.
- Presentations to schools/universities and local, regional and Great Lakes groups.
- Data/information sharing via the CEMP website, local news/media outlets, social media, printed materials, and publications.
- Distribution of CEMP program information and findings to other communities and interested parties.

During 2025, the CEMP Technical Committee members and SWP outreach staff will continue to work with Powell Township schools to implement an education program for 8th grade students around CEMP monitoring of Eagle Mine operations in and around the Eagle Mine site. The education program will include in-classroom lessons, curriculum development aligned with state standards (based on subjects of participating teachers), Eagle Mine site visit(s) hosted by Eagle Mine staff, and participation in CEMP field sampling events with SWP and KBIC staff. The 2025 CEMP Budget (below) includes funding to support these additional outreach efforts.

4. CEMP 2025 Budget

PROJECT MANAGEMENT, OVERSIGHT and OUTREACH		Rate	Hours	Total
*NOTE: Fee for Service Rates for SWP staff include 10-40% in fringe benefits (health insurance, social security, workers compensation, retirement, etc.) and approximately 35% in overhead costs (lease, utilities, office equipment, liability insurance, etc.)				
KBIC Natural Resources Department (outreach, monitoring, stream gages, and program review/development)				$ 65,000
SWP Senior Planner	*Fee for Service Rate	91.15	500	$ 45,580
SWP Field Technician	*Fee for Service Rate	50.00	690	$ 34,500
SWP Field Technician	*Fee for Service Rate	35.00	150	$ 5,250
SWP Field Technician	*Fee for Service Rate	30.00	150	$ 4,500
SWP Executive Director	*Fee for Service Rate	120.00	300	$ 36,000
SWP Data Management/Outreach Specialist	*Fee for Service Rate	45.00	450	$ 20,250
SWP Administrator	*Fee for Service Rate	50.00	355	$ 17,750
TOTAL PROJECT MANAGEMENT, OVERSIGHT AND OUTREACH				**$ 228,830**
CONTRACTUAL SERVICES		**# Samples**	**Cost/Sample**	**Total**
Verification Monitoring and Data Review				
Northern Lake Service Inc. - Eagle Mine Water Treatment Plant		4	$ 569	$ 2,276
Northern Lake Service Inc. - Eagle Mine GWDP Groundwater		8	$ 573	$ 4,584
Northern Lake Service Inc. - Eagle Mine Mine Permit Groundwater		8	$ 489	$ 3,912
Northern Lake Service Inc. - Eagle Mine Mine Permit Surface Water		4	$ 477	$ 1,908
Northern Lake Service Inc. - Eagle Mine Temp Development Rock Storage Area		4	$ 526	$ 2,104
Whitewater Associates - Humboldt Mill Water Treatment Plant		4	$ 991	$ 3,964
Whitewater Associates - Humboldt Mill Mine Permit Groundwater		8	$ 514	$ 4,112
Whitewater Associates. - Humboldt Mill Mine Permit Surface Water		8	$ 578	$ 4,624
			Total Verification Monitoring and Data Review	*$ 27,484*
Additional Monitoring				
Whitewater Associates - CEMP/KBIC Edible/Traditional Plant Study		8	$ 610	$ 4,880
Northern Lake Service Inc. - CEMP Monitoring Well near Eagle Mine		3	$ 573	$ 1,719
Northern Lake Service Inc. - CEMP/KBIC Salmon Trout River Headwaters		16	$ 333	$ 5,328
Eastern Research Group - Air Station Metals		4	$ 286	$ 1,144
			Total Additional Monitoring	*$ 13,071*
			TOTAL CONTRACTUAL	**$ 40,555**
OUTREACH, TRAINING & OTHER SERVICES				
Training/Certifications				$ 400
Cram's Store - Air Station Site Lease Fee				$ 900
Equipment Purcahse/Rentals/Repairs				$ 1,000
Website Maintenance/Updates				$ 500
Powell Township School Program		1	$5,500	$ 5,500
Additional Monitoring (TBD)		1	$7,000	$ 7,000
			TOTAL OTHER	**$ 15,300**
SUPPLIES AND MATERIALS				
Printing (educational materials, reports, etc.)				$ 200
Shipping - Fed Ex				$ 4,200
Field and Office Supplies				$ 3,777
	TOTAL OUTREACH & SUPPLIES			**$ 8,177**
TRAVEL				
Travel for sampling events/meetings	5,500	Miles	$ 0.625	$ 3,438
			TOTAL TRAVEL	**$ 3,438**
			TOTAL CEMP 2025 BUDGET	**$ 296,300**
			CFMC MANAGEMENT FEE	**$ 20,000**
			2025 FUNDING REQUEST	**$ 316,300**

Note: Modifications to the CEMP Annual Budget can be made cooperatively by SWP, KBIC and the CFMC as needed to accomplish the objectives of this work plan including, but not limited to; any new/additional monitoring, additional education/outreach or cost of living adjustments.

Introduction

The Community Environmental Monitoring Program (CEMP) of the Eagle Mine began during 2012 and is implemented by three community-based organizations; the Superior Watershed Partnership (SWP), the Keweenaw Bay Indian Community (KBIC), and the Community Foundation of Marquette County (Foundation). The CEMP is defined and governed by formal agreements between the SWP, Foundation, and Lundin Mining, who purchased the Eagle Mine from Rio Tinto during 2013. The CEMP is designed to build a comprehensive and accurate picture of any environmental impacts that may be a result of Eagle Mine's operations at the mine site, the Humboldt Mill, and along the designated Transportation Route. The CEMP is independent, transparent, and based on the highest scientific standards.

The CEMP consists of four main components: 1) Verification Monitoring, which includes verifying the environmental monitoring done by Eagle Mine as required by its permits 2) Additional monitoring, which includes environmental monitoring done by SWP over and above the monitoring that Eagle Mine is required to do under its permits; and 3) Publication of results and ratings of Eagle Mine's environmental performance; and 4) Community Outreach, to inform the public and provide opportunities for the community to provide input regarding CEMP activities.

In December 2019, the SWP in cooperation with KBIC, and the Foundation negotiated renewal of the CEMP Agreement with Eagle Mine to allow for continued environmental monitoring of operations at the Mine and the Humboldt Mill through 2025. The 2025 Work Plan marks the 14th year of CEMP monitoring and the 12th year of monitoring under the "operational" phase of production. It also marks the 7th year of CEMP monitoring in cooperation with the KBIC.

The Work Plan is organized into three sections that describe CEMP activities 1) Annual Monitoring Objectives, 2) Monitoring Results and Performance Ratings, and 3) Community Input and Public Outreach. A summary of the annual monitoring objectives including work plan tasks, standards and frequency of activities is provided in Table 1. Community Environmental Monitoring Program monitoring locations and parameters for laboratory analyses are provided in Figures 1-9 and Tables 2-14 respectively.

1. Annual Monitoring Objectives

1.1. Verification Monitoring and Data Review

1.1.1. Baseline Data Review

The SWP and KBIC will continue to review and evaluate pre-mining (baseline) environmental data as it relates to data generated during monitoring of mining operations. The SWP recognizes that baseline data in and around the Eagle Mine includes data collected prior to September 2011. Data collected from the Humboldt Mill, Powell Township Air Station, and along the transportation route will be considered baseline through September 2014.

1.1.2. Procedures Review/Observations

SWP and KBIC will continue to review and observe data collection at Eagle Mine and the Humboldt Mill during 2025. The objective is to verify that the procedures used are appropriate and will result in the generation of data sets that are representative of environmental conditions.

1.1.3 Split Sampling

SWP and KBIC will carry out split sampling at permit required monitoring sites at the Eagle Mine site and the Humboldt Mill (groundwater, surface water, and facilities) in conjunction with Eagle Mine's scheduled monitoring. Split sampling is when a sample taken from a single source (e.g. a groundwater well) is divided in two, with each sample analyzed by a different certified laboratory. The objective of the split sampling is to verify that the laboratories used are appropriate and the results are representative of environmental conditions. Split samples will be conducted at Eagle Mine and the Humboldt Mill at the locations shown in Figures 1-6. The frequency and number of samples collected at each site are described in Table 2. Samples will be submitted to an independent laboratory for analyses. Analytical parameters, methods and reporting limits for split sampling are presented in Tables 3-10. The samples may be analyzed for the full parameter list or a subset of the parameters specified for that monitoring point. Results will be compared to Eagle Mine baseline data and applicable permit benchmarks and limits.

1.1.4 Interpretations Review

SWP and KBIC will continue to interpret results of Eagle Mine's permit required environmental monitoring data. The interpretations review will focus primarily on assigning likely root cause (mine impacts, data quality issues or unrelated impacts) to monitoring point values that exceed permit specified benchmarks or thresholds. The SWP and KBIC will utilize relevant baseline and secondary data (data from other sources) where appropriate to document interpretations of results and/or make comparisons to other local or regional environmental data.

1.2 Additional Monitoring

The CEMP Agreement and CEMP Annual Work Plan (this plan) summarize the objectives and procedures for additional (non-permit required) environmental monitoring of Eagle Mine's operations. Additional monitoring proposed for 2025 is summarized below.

1.2.1 Air Quality Monitoring

CEMP air quality monitoring began in 2012 as a result of community concerns about potential air quality impacts arising from Eagle Mine's operations in the vicinities of Big Bay (Powell Township), Marquette, and Humboldt, Michigan. The objective of the monitoring is to generate data that can be used to identify potential impacts to ambient air quality from mining operations. Potential sources of air pollution include mining activity (e.g., blasting, drilling, and facilities), ore transport, and ore processing.

During November of 2012, an air quality and meteorological station was installed in Powell Township per the original *CEMP Agreement*. The station is located in the community of Big Bay behind Crams General Store. The objective of the Powell Township air quality monitoring station is to generate data that can be used to identify potential air quality impacts in the community that may be a result of mining operations. Air quality data are compared to National Ambient Air Quality Standards and Michigan Air Toxic Screening Levels. The meteorological station measures wind speed and direction, temperature, barometric pressure, precipitation, solar radiation, and relative humidity on a continuous basis. During 2025, the station will monitor particulate matter (dust) in the 10-micron size

range (PM10) on a continuous basis. Particulate matter filters will also be sent to a laboratory for analysis of metal concentrations (Table 11) on a quarterly basis. A modem installed at the station provides real-time meteorological and air quality data (PM10) via the CEMP website (https://swpcemp.org/). In addition, periodic summary reports are posted to the CEMP website.

In addition, PurpleAir air quality monitoring devices will be used during 2025 to monitor potential impacts to ambient air quality from mining operations at Eagle Mine, the Humboldt Mill. At each location (TBD), PM 2.5 air quality data will be collected and compared to the U.S. EPA National Ambient Air Quality Standards for PM 2.5 particulate pollution. Results will be summarized and shared with the public via the CEMP website. The additional air quality monitoring will commence upon approval of a request for additional monitoring that details the standards and methodologies for the proposed monitoring. Estimated costs are included in the 2025 budget line item for Additional Monitoring (TBD).

1.2.2 Edible/Traditional Plant Tissue Monitoring

Edible/traditional plant tissue monitoring began in 2015 to evaluate concerns voiced by the KBIC and other community members regarding potential impacts from mining activities on native plant species of high cultural value. The monitoring includes collection and analysis of blueberries (as an indicator species), but may also include other important species such as Juneberry, chokecherry, pin cherry, raspberry, blackberry, strawberry, thimbleberry, cranberry, juniper berry, wintergreen, and wild rice. A list of parameters for analysis are provided in Table 12. Collection sites are located within a two-mile radius of the Eagle Mine and Humboldt Mill as well as a control location (Figure 7). Berry samples will be collected and sent out for analysis at a certified laboratory and compared to guidelines and daily intake recommendations including the US Environmental Protection Agency's oral Tolerable Intake Values (TDI) and the Food and Drug Administration's recommended Daily Values (DV). Periodic summary reports are posted to the CEMP website.

1.2.3 CEMP Groundwater Monitoring Well

On August 28-30, 2017, a CEMP groundwater monitoring well was installed near Eagle Mine to expand the existing monitoring infrastructure and further evaluate potential groundwater impacts as a result of mining activities. The CEMP well is located outside of the mine perimeter (fence) between the Treated Water Infiltration System (TWIS) and the headwaters of the East Branch of the Salmon Trout River, with a groundwater depth of 166-176 feet. Access to the site is made possible through an agreement with Lyme Great Lakes Holding LLC (formerly Weyerhaeuser Company). During 2025, groundwater data will be collected on a quarterly basis from the CEMP well (Figure 8). A list of parameters for analysis are provided in Table 13. Results of the monitoring will be compared to results from Eagle Mine's groundwater discharge permit groundwater monitoring sites.

1.2.4 Salmon Trout River Headwaters Monitoring

During 2017, CEMP in cooperation with the KBIC began water quality monitoring at 8 sites in the headwaters of the Salmon Trout River. The headwaters of the Salmon Trout River begin as natural springs at locations where groundwater daylights and becomes surface water (Figure 9). A list of parameters for analysis on a quarterly basis are provided in Table 14. The objective of additional monitoring of the headwaters of the Salmon Trout River is to monitor potential water quality impacts from Eagle Mine's operations at sites previously monitored by the U.S. Geological Survey (USGS) and the KBIC. Results of the monitoring will be compared to Michigan surface water quality standards and used to assess potential impacts from mining activities to the Salmon Trout River.

1.2.5 USGS Stream Monitoring Gages

The CEMP utilizes surface water quality data from USGS stream monitoring gages located on the Middle Branch Escanaba River at Humboldt, MI (04057800), Salmon Trout River near Big Bay, MI (04043238), and the East Branch Salmon Trout River near Dodge City, MI (04043244) to monitor potential impacts to surface waters from operations at the Humboldt Mill and Eagle Mine. Continuous data and field information from the gages are collected/evaluated by the Great Lakes Indian Fish and Wildlife Commission (GLIFWC) and communicated to CEMP partners via CEMP Technical Committee meetings.

1.2.6 Other Based on Results or New Activities

The SWP and KBIC may also collect additional data related to mining activities during 2025 based on results or new information, community input, and/or new activities including development of Eagle Mine closure plans. The SWP and KBIC will provide Eagle Mine with a plan (including locations, procedures, methodologies and standards) for any additional monitoring prior to commencing with monitoring activities. The CEMP Budget may be amended for additional monitoring needs as they are identified.

2 Monitoring Results and Performance Ratings

2.1 Data Processing/Publication

2.1.1 Data Processing

CEMP's laboratory(s) will deliver monitoring results in electronic format to SWP no later than 45 days of receipt of samples and the data will be processed by SWP within 5 working days of receipt from the laboratory. Data processing procedures will be conducted in a manner consistent with the *CEMP Agreement* and other agreed upon standards/operating procedures. Primary processing consists of verification that samples, parameters, analytical methods, and detection limits were completed as requested. Secondary processing will consist of the evaluation of laboratory quality control data and duplicate data for evidence of quality control issues. Tertiary processing consists of comparison of data to appropriate baseline data, permit specified criteria/benchmarks, or other agreed upon state or federal criteria. The final data processing step follows receipt of Eagle data and consists of the comparison of Eagle's laboratory derived values with values produced by CEMP's laboratory(s).

2.1 Performance Ratings

2.2.1 CEMP Report Card

The CEMP Report Card is located on the CEMP website and includes a red light, yellow light, and green light system used by SWP to rate Eagle Mine on its environmental performance on a quarterly basis by location (Mine or Mill) and type of monitoring. The CEMP website and Report Card will be updated to communicate results of environmental

monitoring at specific locations on a quarterly basis. In addition, the SWP will work with KBIC, Eagle Mine and additional partners to improve data interpretation and risk communication to the public, including, but not limited to, third party analysis and interpretation of data and risk communication as needed.

2.2.2 CEMP Monitoring Reports

In addition to the website and Report Card updates, CEMP will continue to periodically publish summary reports of monitoring activities and results to the CEMP website.

3. Community Outreach

The CEMP Community Outreach Plan (Figure 10) describes activities of SWP, KBIC, and the CFMC related to community outreach. The objectives of the plan are to inform the public about Eagle Mine's environmental performance and to obtain input from community members regarding CEMP. Outreach Plan activities are tracked quarterly and include, but are not limited to:

- Direct contacts/meetings with community members and interested groups.
- Presentations to schools/universities and local, regional and Great Lakes groups.
- Data/information sharing via the CEMP website, local news/media outlets, social media, printed materials, and publications.
- Distribution of CEMP program information and findings to other communities and interested parties.

During 2025, the CEMP Technical Committee members and SWP outreach staff will continue to work with Powell Township schools to implement an education program for 8th grade students around CEMP monitoring of Eagle Mine operations in and around the Eagle Mine site. The education program will include in-classroom lessons, curriculum development aligned with state standards (based on subjects of participating teachers), Eagle Mine site visit(s) hosted by Eagle Mine staff, and participation in CEMP field sampling events with SWP and KBIC staff. The 2025 CEMP Budget (below) includes funding to support these additional outreach efforts.

4. CEMP 2025 Budget

PROJECT MANAGEMENT, OVERSIGHT and OUTREACH		Rate	Hours	Total
*NOTE: Fee for Service Rates for SWP staff include 10-40% in fringe benefits (health insurance, social security, workers compensation, retirement, etc.) and approximately 35% in overhead costs (lease, utilities, office equipment, liability insurance, etc.)				
KBIC Natural Resources Department (outreach, monitoring, stream gages, and program review/development)				$ 65,000
SWP Senior Planner	*Fee for Service Rate	91.15	500	$ 45,580
SWP Field Technician	*Fee for Service Rate	50.00	690	$ 34,500
SWP Field Technician	*Fee for Service Rate	35.00	150	$ 5,250
SWP Field Technician	*Fee for Service Rate	30.00	150	$ 4,500
SWP Executive Director	*Fee for Service Rate	120.00	300	$ 36,000
SWP Data Management/Outreach Specialist	*Fee for Service Rate	45.00	450	$ 20,250
SWP Administrator	*Fee for Service Rate	50.00	355	$ 17,750
TOTAL PROJECT MANAGEMENT, OVERSIGHT AND OUTREACH				**$ 228,830**
CONTRACTUAL SERVICES		**# Samples**	**Cost/Sample**	**Total**
Verification Monitoring and Data Review				
Northern Lake Service Inc. - Eagle Mine Water Treatment Plant		4	$ 569	$ 2,276
Northern Lake Service Inc. - Eagle Mine GWDP Groundwater		8	$ 573	$ 4,584
Northern Lake Service Inc. - Eagle Mine Mine Permit Groundwater		8	$ 489	$ 3,912
Northern Lake Service Inc. - Eagle Mine Mine Permit Surface Water		4	$ 477	$ 1,908
Northern Lake Service Inc. - Eagle Mine Temp Development Rock Storage Area		4	$ 526	$ 2,104
Whitewater Associates - Humboldt Mill Water Treatment Plant		4	$ 991	$ 3,964
Whitewater Associates - Humboldt Mill Mine Permit Groundwater		8	$ 514	$ 4,112
Whitewater Associates. - Humboldt Mill Mine Permit Surface Water		8	$ 578	$ 4,624
			Total Verification Monitoring and Data Review	*$ 27,484*
Additional Monitoring				
Whitewater Associates - CEMP/KBIC Edible/Traditional Plant Study		8	$ 610	$ 4,880
Northern Lake Service Inc. - CEMP Monitoring Well near Eagle Mine		3	$ 573	$ 1,719
Northern Lake Service Inc. - CEMP/KBIC Salmon Trout River Headwaters		16	$ 333	$ 5,328
Eastern Research Group - Air Station Metals		4	$ 286	$ 1,144
			Total Additional Monitoring	*$ 13,071*
			TOTAL CONTRACTUAL	**$ 40,555**
OUTREACH, TRAINING & OTHER SERVICES				
Training/Certifications				$ 400
Cram's Store - Air Station Site Lease Fee				$ 900
Equipment Purcahse/Rentals/Repairs				$ 1,000
Website Maintenance/Updates				$ 500
Powell Township School Program		1	$5,500	$ 5,500
Additional Monitoring (TBD)		1	$7,000	$ 7,000
			TOTAL OTHER	**$ 15,300**
SUPPLIES AND MATERIALS				
Printing (educational materials, reports, etc.)				$ 200
Shipping - Fed Ex				$ 4,200
Field and Office Supplies				$ 3,777
	TOTAL OUTREACH & SUPPLIES			**$ 8,177**
TRAVEL				
Travel for sampling events/meetings	5,500	Miles	$ 0.625	$ 3,438
			TOTAL TRAVEL	**$ 3,438**
			TOTAL CEMP 2025 BUDGET	**$ 296,300**
			CFMC MANAGEMENT FEE	**$ 20,000**
			2025 FUNDING REQUEST	**$ 316,300**

Note: Modifications to the CEMP Annual Budget can be made cooperatively by SWP, KBIC and the CFMC as needed to accomplish the objectives of this work plan including, but not limited to; any new/additional monitoring, additional education/outreach or cost of living adjustments.

CEMP OUTREACH/MARKETING PLAN: SWP, KBIC, and CFMC					
CATEGORY	**ACTION**	**NOTES**	**TIMEFRAME**	**TIMELINE FOR COMPLETION**	**TRACKING METRICS**
Websites:	Update/post CEMP related information/data to respective websites	Includes Eagle Mine data, CEMP split sampling, additional monitoring data, special reports, news, etc.	Post data within 30 days of receiving results, all other ongoing	Quarterly	Number of website updates made. Use website analytics to estimate number of people reached.
Social Media:	Share CEMP news, website updates, photos, etc. through CEMP, SWP, KBIC, and CFMC social media outlets (Facebook pages, etc.)	Include short decsription of news and link to swpcemp.org as appropriate	Within 14 days of posting to website	Quarterly	Number of social media posts made including estimated number of people reached
News/Media Outlets:	Share CEMP news, report card findings, and program information through local, regional, and national media outlets: SWP, KBIC, CFMC	Post CEMP report card to newspaper, conduct radio/TV interviews, etc.	Post report card within 14 days of posting to website, all other ongoing	Annually or as needed	Number and type of media activity including estimated number of people reached
Direct Contacts:	Direct contacts through in person meetings, email, phone, mailings, etc: SWP, KBIC, CFMC	Share program data/information and obtain program feedback	Ongoing	Monthly	Number and type of direct contacts made
Presentations:	Present CEMP findings and program information to intersted parties: SWP, KBIC, CFMC	Present CEMP data/info to community groups, K-12 schools, universities, etc. as identified and/or requested	Ongoing	As needed	Number and type of presentations made, audience (local, regional, national, international), and number of people reached
Outerach Materials:	Create and Distribute Outreach Materials as needed: SWP, KBIC, CFMC	Includes presentations, poster boards, newsletters, video, etc.	Ongoing	As needed	Number and type of outreach materials developed and/or distributed, estimated number of people reached (where appropriate)
Public Engagement:	Engage the public in CEMP activities; Obtain public input and feedback related to CEMP: SWP, KBIC, CFMC	Provide opporunities for the public to get involved - citizen science, etc. Create and adverstise social survey to obtain feedback and public input on CEMP program activities.	Ongoing	Annually	Number of people engaged; Summary of survey results

Table 1.
Summary of 2025 Annual Monitoring Objectives

WORK PLAN TASK	SITE(S)	PARMETERS	STANDARDS	PERIOD	FREQUENCY
Verification Monitoring and Data Review					
Baseline Data Review	Permit compliance and background monitoring sites (Mine and Mill)	Review of pre-mining data (groundwater, surface water, air, aquatics, and flora and fauna)	Part 632 Rule and Applicable Permits (Mining, Groundwater Discharge, Inland Lakes and Streams, and NPDES)	Mine data collected prior to September 2011, Mill data through September 2014	Ongoing
Operations Data Review	Permit compliance and background monitoring sites (Mine and Mill)	Review of operations data (groundwater, surface water, and wastewater, solid waste, air, aquatics, flora and fauna)	Part 632 Rule and Applicable Permits (Mining, Groundwater Discharge, Inland Lakes and Streams, and NPDES)	Mine data collected after September 2011, Mill data collected after September 2014	Ongoing, based on Eagle Mine scheduled monitoring
Procedures Review/Observations	Permit compliance and background monitoring sites (Mine and Mill)	Review of procedures and field data collection (groundwater, surface water, and wastewater, solid waste, air, aquatics, flora and fauna)	Part 632 Rule and Applicable Permits (Mining, Groundwater Discharge, Inland Lakes and Streams, and NPDES)	2025	Ongoing, based on Eagle Mine scheduled monitoring
Interpretation Review	Permit compliance and background monitoring sites (Mine and Mill)	Interpretation of results: groundwater, surface water, and facilities wastewater (quantity, elevation, flow, and quality)	Part 632 Rule and Applicable Permits (Mining, Groundwater Discharge, Inland Lakes and Streams, and NPDES)	2025	Ongoing, based on Eagle Mine scheduled monitoring
Split Sampling	Permit compliance and background monitoring sites (Mine and Mill)	Groundwater, surface water, and facilities wastewater quality	Part 632 Rule and Applicable Permits (Mining, Groundwater Discharge, Inland Lakes and Streams, and NPDES)	2025	Ongoing, based on Eagle Mine scheduled monitoring
Additional Monitoring					
Air Quality - Powell Township	Stationary Air/Meterological Station in Big Bay	PM10, metals analysis; wind speed and direction, air temperature, relative humidity, and solar radiation	National Ambient Air Quality Standards and Michigan Air Toxic Screening Levels	2012-2025	Continuous (PM10 and meterological data) and Quarterly (Metals)
Air Quality - PurpleAir Monitoring	Eagle Mine, Humbodlt Mill, and Powell Township	PM2.5	U.S. EPA Air Quality Index (AQI)	2025	Continuous PM2.5, publicly available real-time data
Edible/Traditional Plant Study	Eagle Mine, Humbodlt Mill, and Control Area	Metals analysis plant tissue and fruit	US Environmental Protection Agency's (US EPA) oral tolerable intake values (TDI) and the Food and Drug Administration's (FDA) recommended Daily Values (DV)	2015-2025	Annually
CEMP Groundwater Monitoring Well	Eagle Mine - between TWIS and Salmon Trout River	Groundwater quality	Comparison with Eagle Mine Part 632 Mining Permit and Groundwater Discharge Permit Monitoring Sites	2017-2025	Quarterly

Table 2
Summary of Permit Required "Split Sampling" Monitoring Sites at Eagle Mine and the Humboldt Mill

Monitoring Location/Type	Data Range (years)	Permit	Frequency	Number of Monitoring Sites	2025 CEMP Samples/Year
EAGLE MINE					
Surface Water	2013-2025	Mine Permit	Quarterly	11	4
Groundwater	2013-2025	Mine Permit	Quarterly	24 (10 background and 14 compliance)	8
Facilities: Temporary Development Rock Storage Area (TDRSA) Contact Water Sump and Leak Detection Sump, Contact Water Basins/WTP Influent	2013-2025	Mine Permit	Quarterly	4	4
Facilities: Water Treatment Facility Effluent	2012-2025	Groundwater Discharge Permit	Quarterly	2	4
Groundwater	2013-2025	Groundwater Discharge Permit	Quarterly	15 (7 background and 8 compliance)	8
Total Eagle Mine				**55**	**28**

Monitoring Location/Type	Data Range (years)	Permit	Frequency	Number of Monitoring Sites	2025 CEMP Samples/Year
HUMBOLDT MILL					
Groundwater	2014-2025	Mine Permit	Quarterly	23	8
Surface Water	2014-2025	Mine Permit	Quarterly	8	8
Facilities: Water Treatment Facility	2014-2025	Surface Water Discharge Permit	Quarterly	2	4
Total Humboldt Mill				**35**	**20**

2025 Additional Monitoring

- Powell Township Air Station: PM10 continuous data; Metals: 1 sample/quarter = 4 samples/year.
- PurpleAir Monitoring Devices (3 locations): PM2.5 continuous data.
- Berry Study: Mine, Mill, Control = 8 berry samples/year. Note: additional sites may be added.
- CEMP Groundwater Well at Eagle Mine: 1 sample per quarter for three quarters = 3 water samples/year.
- Salmon Trout River Headwaters Monitoring: 8 samples two times per year = 16 samples/year.
- USGS Stream Monitoring Gages: continuous data
- Additional monitoring TDB

Total Additional Monitoring: 31 samples/year

Table 12
Parameters and Analytical Methods for Edible/Traditional Plant Tissue Monitoring

Parameters	Method
Aluminum	ICP
Antimony	ICP
Arsenic	ICP
Barium	ICP
Beryllium	ICP
Boron	ICP
Cadmium	ICP
Calcium	ICP
Chromium	ICP
Cobalt	ICP
Copper	ICP
Iron	ICP
Lead	ICP
Lithium	ICP
Magnesium	ICP
Manganese	ICP
Mercury	total as Hg on solids
Molybdenum	ICP
Nickel	ICP
Potassium	ICP
Selenium	ICP
Sodium	ICP
Strontium	ICP
Thallium	ICP
Vanadium	ICP
Zinc	ICP
Ammonia	ammonia as N on solids
Nitrate/Nitrite Nitrogen	nitrate/nitrite as N on solids
Total Organic Nitrogen - TKN	
Sulfate	as SO4 on solids
Sulfur	
Total Phosphorus	ICP
Uranium
